

IoT LoRa application service Tutorial

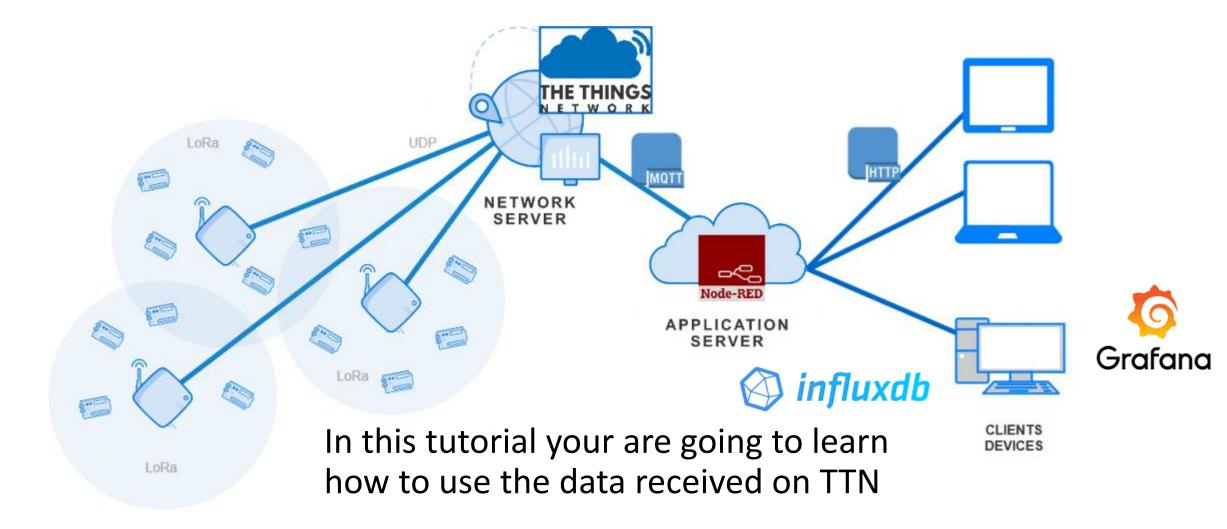

F. Ferrero, J. Lanteri

V.1.3

Node Red – InFluxDB - GRAFANA

Outline

1/ Definition

2/ Tutorial

Node Red

- Node-RED is a programming tool for wiring together hardware devices, APIs and online services in new and interesting ways.
- It provides a browser-based editor that makes it easy to wire together flows using the wide range of nodes in the palette that can be deployed to its runtime in a single-click.
- Built on Node.js
 - The light-weight runtime is built on Node.js, taking full advantage of its event-driven, non-blocking model. This makes it ideal to run at the edge of the network on low-cost hardware such as the Raspberry Pi as well as in the cloud.

Outline

1/ Definition

2/ Tutorial

Node-Red

First install Node.JS: https://nodejs.org/en/download/

Then: Install Node-red:

https://nodered.org/docs/getting-started/windows

Install package in Node Red:
node-red-node-email

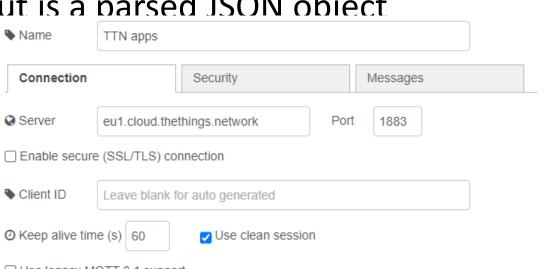

Install git: https://git-scm.com/downloads

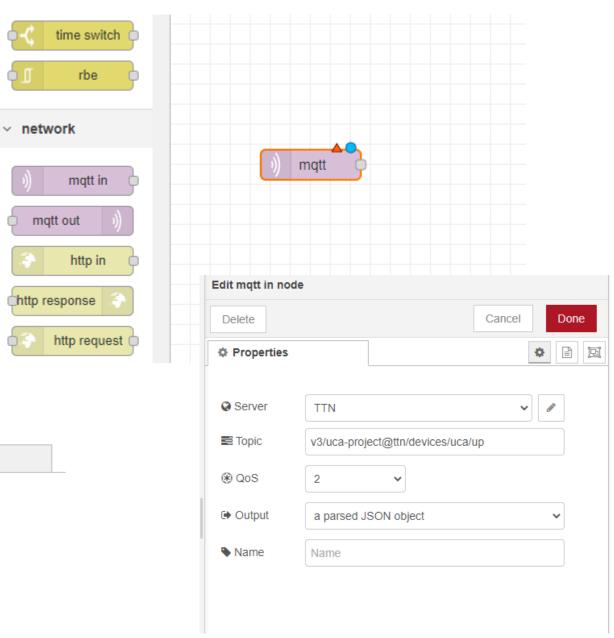

- Start NODE.js command prompt
- Run : node-red
- Open your web browser and go to http://127.0.0.1:1880

```
node-red
Your environment has been set up for using Node.js 10.13.0 (x64) and npm.
C:\Users\hp_sim>node-red
 Nov 06:02:48 - [info]
Welcome to Node-RED
_____
5 Nov 06:02:48 - [info] Node-RED version: v0.19.5
5 Nov 06:02:48 - [info] Node.js version: v10.13.0
5 Nov 06:02:48 - [info] Windows_NT 6.1.7601 x64 LE
5 Nov 06:02:50 - [info] Loading palette nodes
5 Nov 06:02:52 - [warn] rpi-gpio : Raspberry Pi specific node set inactive
                       [node-red/tail] Not currently supported on Windows.
5 Nov 06:02:52 - [warn]
5 Nov 06:02:52 - [info] Settings file : \Users\hp_sim\.node-red\settings.js

5 Nov 06:02:52 - [warn] Projects disabled : editorTheme.projects.enabled=false
5 Nov 06:02:52 - [info] Flows file
                                      : \Users\hp_sim\.node-red\flows_hp_sim-HP
json
5 Nov 06:02:52 - [warn]
```

- You have the graphical Node-red editor
- Add mqtt in node
- Edit mqtt
- Choose « Add new mqtt-broker ... » in App and click on edit

Output is a parsed JSON object.

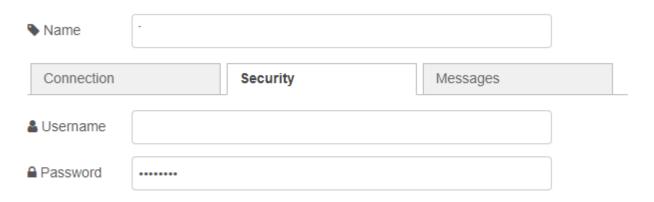

☐ Use legacy MQTT 3.1 support

- Update security and topic:
- Go to you application in TTN
- Copy past the User name and keys (generate new API Keys)
- Add topic :

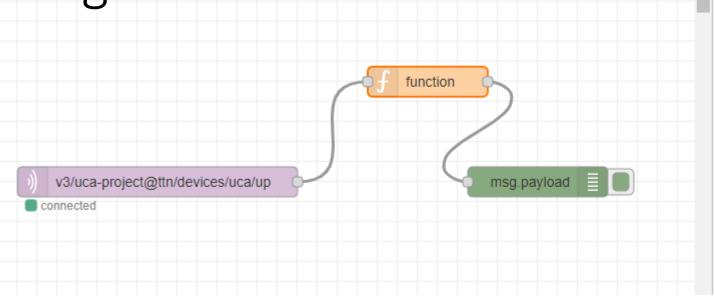

v3/uca-project@ttn/devices/device_name/up

MQTT

The Application Server exposes an MQTT server to work with streaming events. In order to use the MQTT server you need to create a new API key, which will function as connection password. You can also use an existing API key, as long as it has the necessary rights granted. Use the connection information below to connect.

Connection credentials		
Public address	eu1.cloud.thethings.network:1883	
Public TLS address	eu1.cloud.thethings.network:8883	
Username	uca-project@ttn	
Password	Generate new API key Go to API keys	

```
28/10/2021, 14:47:37 node: 59a8b4e2.286e0c

msg.payload: array[1]

▼ array[1]

▼ 0: object

    rssi: -88

    voltage: 4.11

    temperature: 23.8

    Humidity: 42

    luminosity: 1022

28/10/2021, 14:48:06 node: 59a8b4e2.286e0c

msg.payload: array[1]

▶ [ object ]

28/10/2021, 14:48:35 node: 59a8b4e2.286e0c

msd.payload: array[1]
```

```
var logMsgs = [];
logMsgs[0]=({payload: {
    rssi: msg.payload.uplink_message.rx_metadata[0].rssi,
    voltage: msg.payload.uplink_message.decoded_payload.analog_in_3,
    temperature:msg.payload.uplink_message.decoded_payload.temperature_1,
    humidity: msg.payload.uplink_message.decoded_payload.relative_humidity_2,
    luminosity: msg.payload.uplink_message.decoded_payload.luminosity_4
    }
});
return logMsgs;
```

- If you want to extract only 1 data,
- As an exemple the RSSI (received signal Strength indicator
- Use a function to extract the desired data

```
Tuto msg Test msg Test
```

```
var tmp = {};
tmp.payload = msg.payload.uplink_message.decoded_payload.luminosity_4
return tmp;
```

```
14/03/2021, 21:36:02 node: e0e31eb9.79c5e
msg: Object

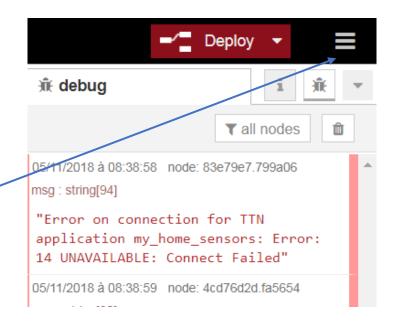

▼ object

payload: 241

_msgid: "572f7153.ffebf"
```

• On the editor, click here And go to palette editor Install:

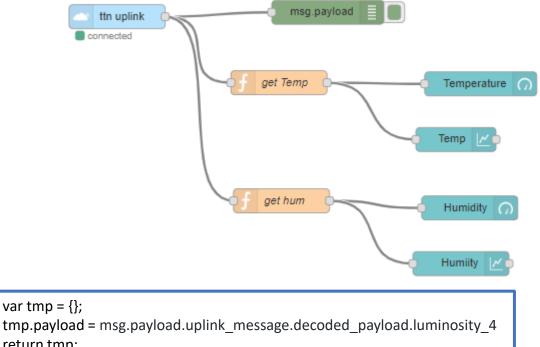

node-red-dashboard

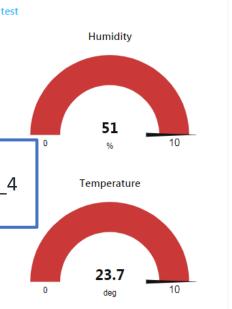

Add a Dashboard

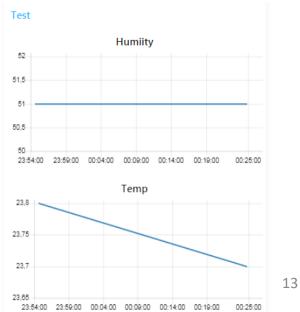

- Go to Manage Palette, select Install
- Install: node-red-dashboard
- Add a function to extract sensor values (Temp, Hum, luminosity...)
- Add Gauge and Graph for Dashboard section
- Add a new UI group in the Gauge and Graph
- Go to : http://127.0.0.1:1880/ui/

 $var tmp = {};$ tmp.payload = msg.payload.uplink message.decoded payload.luminosity 4 return tmp;

 $var tmp = {};$ tmp.payload = msg.payload.uplink message.decoded payload.luminosity 4 return tmp;

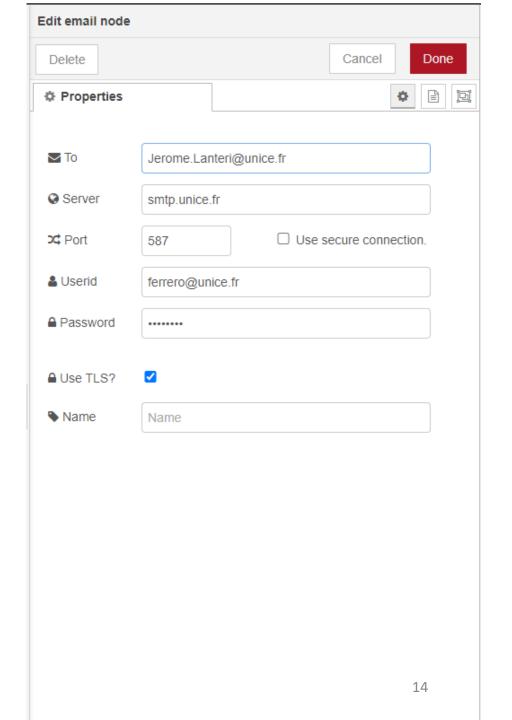

Send an email

- Go to Manage Palette, select Install
- Install: node-red-node-email
- Configure your email with unice credential (use your ENT account)
- Use a timestamp to test (click to trigger it)
- Email object is defined in msg.topic
- Email content is defined in msg.payload

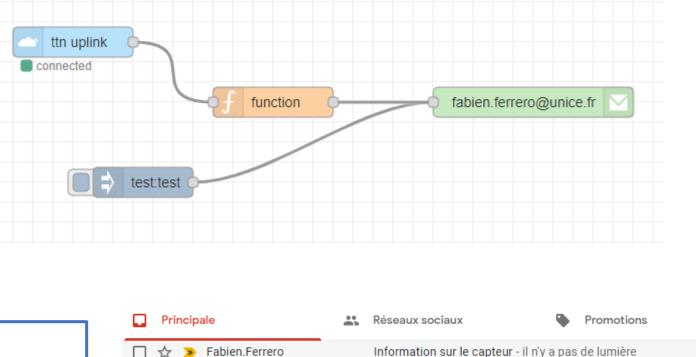

Send an email triggered on luminosity level

- Add a function to detect is the luminosity overpass a threshold
- Send an email with a sentence

```
var tmp = {};
var lum = msg.payload.uplink_message.decoded_payload.luminosity_4;
tmp.topic = "information capteur";
if (lum>200)
tmp.payload = "il y a de la lumiere";
else
tmp.payload = "il n'y a pas de lumiere";
return tmp;
```

```
var tmp = {};
var lum
=msg.payload.uplink_message.decoded_payload.luminosity_4;
tmp.topic = "information capteur";
if (lum>200)
tmp.payload = "il y a de la lumiere";
Else
tmp.payload = "il n'y a pas de lumiere";
return tmp;
```
